

1 JUN 1973

MEMORANDUM FOR: Director of National Estimates
Director of Planning, Programming, and
Budgeting
General Counsel
Inspector General
Legislative Counsel

FROM: Secretary, CIA Management Committee WEC

SUBJECT: CIA Management System: Performance Evaluation
and Annual Report

1. The attached directive outlines the procedures for handling the performance evaluation and annual report requirements of the CIA Management System.

2. As you will note from the directive, in reporting on performance in FY 1973 it will be necessary to assume that you were operating against already approved objectives. In addition, if you have not yet formulated your objectives for FY 1974 and FY 1975, you should have them ready for review and approval at the Annual Conference this June.

3. The format for you to follow is the format for a component Annual Report as indicated in Attachment B.

4. Your report for FY 1973 will be submitted to the Secretary, CIA Management Committee by 1 September 1973.

CIA MANAGEMENT SYSTEM:

PERFORMANCE EVALUATION AND ANNUAL REPORT

1. An Agency performance management system has recently been inaugurated. This system includes the issuance of objectives by the DCI (within the context of Agency mission and Community objectives), by the Deputy Directors for their Directorates, and by the heads of Components (Offices, Divisions within the DDO). Approved objectives are to be the basis for evaluation of performance on an annual basis. An Annual Report will be the principal vehicle for component self-evaluation and for reporting to higher management on performance.

2. The first full cycle of the performance management system began with the announcement of DCI FY 1974 and FY 1975 priorities and general objectives in December 1972. These DCI priorities and objectives, in conjunction with budget and manpower levels issued by OMB, provided the basis for the development of Directorate and Component objectives by the Directorate and Component chiefs respectively. Directorate and Component Operating Program (Program Execution Plan) submissions incorporated DCI, Deputy Director and Component objectives (as appropriate) for submission by 30 April 1973. The Directorate and Component objectives will be reviewed and approved at the Director's

ILLEGIB

~~SECRET~~
Approved For Release 2002/06/05 : CIA-RDP75-00793R000200060006-6

Planning Conference in June. Approved Objectives will thereupon become effective.

3. Annual Reports will be prepared by each Directorate and Component. The Reports will indicate accomplishment, progress or shortfall with respect to each objective and will include appropriate analysis and evaluation. The Component Annual Reports will constitute a principal input into Directorate program review processes. They will also serve as Component annual histories.

4. Because the performance management system has just been inaugurated (beginning December 1972) and final objectives will be reviewed and approved in June, Annual Reports due this coming September and October (see paragraph 5, below) will address the approved objectives as if they had been issued at the beginning of FY 1973 and, in effect, give a status report with respect to each of the Objectives as of 30 June 1973. This should be feasible since most of the DCI and DD objectives relate to one or another of the longstanding missions of the Directorates and Components. In subsequent years the Annual Reports will follow a full objective identification and performance cycle. The FY 1974 Annual Report, for example, will deal with the objectives which were identified in December 1972 and approved in June 1973 for implementation.

SECRET

5. Component reports for FY 1973 will be submitted simultaneously to the appropriate Deputy Director and the Secretary, CIA Management Committee by 1 September 1973. Directorate reports will be due to the Secretary, CIA Management Committee, on 1 October. See attachments for formats of Component and Directorate Annual Reports.

6. The Agency Annual Report will be completed by O/PPB by 1 November and provided to the National Security Council and the President's Foreign Intelligence Advisory Board.

B - Component Annual Report

SECRET

DIRECTORATE ANNUAL REPORT

SECTION I. DIRECTORATE LONG RANGE GOALS AND STRATEGIES

1. A statement of the overall, long range operating and management goals of the Directorate, for the purpose of placing discussion of specific DCI and Deputy Director objectives in perspective.

SECTION II. OBJECTIVES AND RESULTS

2. DCI and Deputy Director objectives will be listed and a factual status report on each provided. The Directorate need not be constrained by a specific format as prescribed for the Component Annual Report. For an objective which has been delegated to one and only one action Component, the Directorate Report may refer to the Annual Report of that Component and need not repeat or recapitulate the contents of the report, unless the Deputy Director has substantial additional or modifying comment to make.

For objectives delegated to more than one Component, a synthesis or overview of total progress should be made, referring to Component Annual Reports, as appropriate.

In this latter case, particular focus should be placed on integration, cooperation and mutual support of the several concerned Components.

~~SECRET~~

Approved For Release 2002/06/05 : CIA-RDP75-00793R000200060006-6

SECTION III. EVALUATION OF COMPONENT PERFORMANCE

3. The Deputy Director will take each Component individually and rate first performance against objectives and then the overall performance of the Component. As a minimum performance ratings will be made for all DCI and Directorate objectives. Components' objectives will be rated individually or as a group in accordance with their significance to Agency management. The rating system to be used is the five-step system as presented on page 16 of the Program Call of December 1972. This rating will reflect the subjective evaluation of the Deputy Director. The Deputy Director will, however, develop, utilize and cite such systematic reviews of Component performance as possible in order to buttress his evaluation.

SECTION IV. DIRECTORATE OUTPUT: ANALYSIS AND EVALUATION

4. The Directorate will define and identify its major categories of output and the major external customers or recipients of each category of output. It will describe measures in existence and additional steps taken to ascertain customer needs and requirements and the degree of their satisfaction. Statistical and numerical

SECRET

displays of production may be used, as appropriate, to demonstrate the results of Directorate output analysis and evaluation.

5. A narrative evaluation of production will be made, in order to prevent a "numbers game" from obscuring outstanding or high impact individual accomplishments, and in order to provide qualitative evaluation.

SECTION V. RECOMMENDATIONS

6. Same as Section V of Component Annual Report.

COMPONENT ANNUAL REPORT

SECTION I. GENERAL

1. Section I of the Component Annual Report is to provide an introduction to and a context for the discussion of accomplishments with respect to specific objectives in Section II. This introduction may thus appropriately discuss the external operating situation or environment of the Component, focusing on those aspects of the situation which facilitate or impede the accomplishment of its mission. Specific events or developments which occurred during the reporting period and which affected the general accomplishment of the Component's objectives should be identified.

2. Section I also may include an overview of the operating and management strategies of the Component in pursuance of its mission. It may be necessary, for example, for a Component to explain its general approach to its missions and objectives, in order to render separate discussions of its specific objectives intelligible.

3. Section I may also identify and address factors of a general nature (non-operational) which affected performance negatively or positively. For example, a renewed outbreak of

the Arab-Israeli war should be an external situational factor which required diversion of resources and slow-down of other activities, and should be mentioned under paragraph 1, above, in discussing the operating situation. On the other hand, a reorganization or realignment within a Directorate which substantially affected the reporting component could be identified as a general factor of an internal nature.

4. Changes in objectives midstream (e.g., issuance of a new objective halfway through the operating year) should be identified and discussed.

SECTION II. ACCOMPLISHMENTS

5. This Section will address each objective of the Component successively, and discuss results achieved--full accomplishment, degree of progress or lack of progress--and other factors, in accordance with the following outline:

a. Objective 1 (identify either DCI, DD or Component)

(1) Statement of Objective

(2) Action Plan

A paragraph to describe the plan followed and explain "benchmarks," "milestones"

(intermediate task targets), or standards used for measuring progress.

(3) Progress and Shortfall

Description of results achieved: full accomplishment, or failing full accomplishment, a measure of the progress made during the year in terms of "milestones" passed, actions completed, or intermediate standards reached. This section is the heart of the report and should be treated fully and seriously, avoiding any masking of shortfall or any shortfall, or treatment that makes lack of progress look like success. This section should be developed in adequate detail and fact as to communicate and demonstrate exactly where the Component stands along the scale of achievement. It is not expected that all objectives can be fully or even satisfactorily accomplished in the given time frames. This section should be developed on a statistical or quantitative basis to the extent that statistics

SECRET

or quantitative measurements are applicable and useful to illustrate or prove a point. The numbers should then be fleshed out in factual and descriptive narrative.

(4) Problems

Problems and obstacles relative to the objective and encountered in the course of implementing the action program should be identified and described.

Measures taken to overcome problems and obstacles should be identified, or measures taken to assure that the obstacles will not reoccur should be described.

(5) Future Plans

The Component may wish to modify the action plan, or to develop a new one. New benchmarks should be specified.

(6) Costs

Dollar costs and manyear commitment to the objective should be estimated. This will undoubtedly require estimating and pro-rating across projects, activities and organizational sub-units. Accounting precision is not necessary, but the approximations

SECRET

should nonetheless be as good as possible.

Components should retain for at least one year the worksheets used to develop these estimates.

b. Objective 2.

As above

c. Objective 3.

etc.

SECTION III. OTHER ACTIVITIES

6. This section should be used to identify and describe significant activities conducted within or by the Component which are not subsumed under one of the listed DCI, DD or Component objectives. Each separate significant activity should carry a dollar cost and manyear estimate in accordance with Section II above.

7. For example, a Component may have one or several major activities which are routine in nature and constitute infrastructure for the visible outputs of the Component but are not easily identifiable with any single output.

SECTION IV. RESOURCES SUMMARY

8. The Component will merely pull the dollar and manyear estimates from Sections II and III above and recapitulate them in a single table.

SECTION V. RECOMMENDATIONS

9. In this section the Component may provide a free discussion of the objectives, feasibility, strategy changes, or resource or other requirements. The Component may wish to recommend modification or deletion of certain objectives, addition of new objectives. It may wish to discuss new equipment ideas or requirements, new or different training or personnel requirements, and so on.

The common thread for such discussions, analyses and recommendations is the problems encountered and experiences gained in attempting to meet the Component's specified objectives.
